VIEWS:

1. vw_ActiveCases:

- **Purpose:** This view provides a list of active cases, excluding those that are "Closed" or "Case Locked." It can be used for reporting the current state of cases within the system.
- **Use in Decision Making:**
 - **Case Management:** Managers or decision-makers can quickly identify which cases are still open or in progress, helping prioritize actions, resources, or legal actions based on case severity or other factors.
 - **Workflow Monitoring:** It helps track which cases need attention and are still in an active state, aiding in operational efficiency and ensuring that closed or locked cases are excluded from ongoing processes.

2. vw_RegulatoryReports:

- **Purpose:** This view displays the status of regulatory reports submitted to regulatory agencies, showing the tracking number, submission date, and current status.
- **Use in Decision Making:**
 - **Regulatory Compliance:** Organizations can use this view to monitor the status of reports submitted to regulatory bodies, ensuring that all required reports are filed and are up to date. If there are delays or issues, corrective actions can be taken to ensure compliance.

3. vw_PatientOverview:

- **Purpose:** This view provides a detailed summary of patients and their cases, including patient names, medical history, case descriptions, case dates, and severity.
- **Use in Decision Making:**
 - **Patient Care and Treatment:** Healthcare providers or case managers can use this view to get an overview of a patient's medical background and ongoing case severity. It aids in making informed decisions regarding the patient's treatment plan, interventions, or follow-ups.
 - **Care Prioritization:** The view helps prioritize care for patients with more severe cases, allowing healthcare teams to act promptly.

4. vw_ProductDosage:

- **Purpose:** This view shows the products and their corresponding dosage regimens, which includes product names, dosages, and frequencies.
- **Use in Decision Making:**
 - **Treatment Planning:** Healthcare providers can use this view to confirm or adjust the dosage regimens for patients based on the products prescribed. This ensures that treatments are administered as per the prescribed plan, improving patient outcomes.
 - **Inventory and Stocking Decisions:** By reviewing which products are in use and their dosages, hospitals or pharmacies can make decisions about inventory management, ensuring that products are stocked appropriately based on demand.

Sdf

5. CaseFollowupSummary:

- **Purpose:** This view provides insights into cases, their current status, the patient involved, the most recent follow-up date, and the total number of follow-ups.
